

Medtech Software Disaster Recovery

The Interbase backup fails with a gds error:

- Take a copy of the MT32.ib and blob.ib files.
- Re-run the last MedTech Update from www.medtechglobal.com
- Put gfix.exe into the data directory
- Open a DOS prompt and cd\mt32\data
- Set isc_user=SYSDBA
- Set isc_password=masterkey
- Gfix -v -f mt32.ib
 - This hopefully will report some record level errors
- Gfix -m -f mt32.ib
- Gfix -m -i mt32.ib
- Gfix -m -f mt32.ib
- Gfix -m -i mt32.ib
- Gfix -v -f mt32.ib
- Now re-run the Interbase Backup & restore & hope it works.
